Dental Locum Opportunities in Malaysia

If you're a dental surgeon yourself and is looking for some locum opportunities in Malaysia, listed here are some information that may help you find the right one. Or if you're looking to work together with your fellow colleagues, please fill in the form on the right and submit it.

What is a Locum? - Locum, short for the Latin phrase locum tenens (i.e. "place holder", akin to the French "lieutenant"), is a person who temporarily fulfills the duties of another. For example, a locum doctor is a doctor who works in the place of the regular doctor when that doctor is absent, or when a hospital/practice is short-staffed. These professionals are still governed by their respective regulatory bodies, despite the transient nature of their position.

5 star My experience with Dr Ong Teng Kai
Clayton Ibrahim 6 months ago

5 star
Underwent root canal treatment under Dr Ong Teng Kai. My experience with Dr Ong was nothing short of a thoroughly pleasing treatment, ceasing off completely my fear of visiting a dentist after a bad experience in my past. His professional demeanour alongside with his gentleness and patience made the whole procedure relatively pain free. Dr Ong's performance during the procedure is not the only thing I find impressive, his approach before the procedure was equally impressive. Before beginning the procedure, he clearly highlights the dentist's case and makes full assessment, detailing the possible treatment and the prognosis of each possible treatment. Upon the completion of the procedure, he even takes the effort to ask his assistant to call me and inquire my condition. Overall, Dr Ong Teng Kai is an excellent dentist, someone who is professional, patient, intelligent, and genuinely cares for his patient. A good human being indeed. I am absolutely pleased with him and fit in every penny spent worth it.

Joke 1 year ago

Hi,

When I was young I had a big cavity on my front teeth and from the dental side I need to do a root canal when I am older. I want my teeth on it again and now I am 22. The general dentist drill the teeth and says the teeth is impossible to be saved. The cavity is very close to the root and the gum and the only way is to extract the teeth.

would like to know is that the only way?
